VISION PROPHY POWDER®

**WITH ENHANCED
FORMULATION**

We're excited to reintroduce our polishing powder for dental prophylaxis — now with a improved formula designed to elevate daily practice.

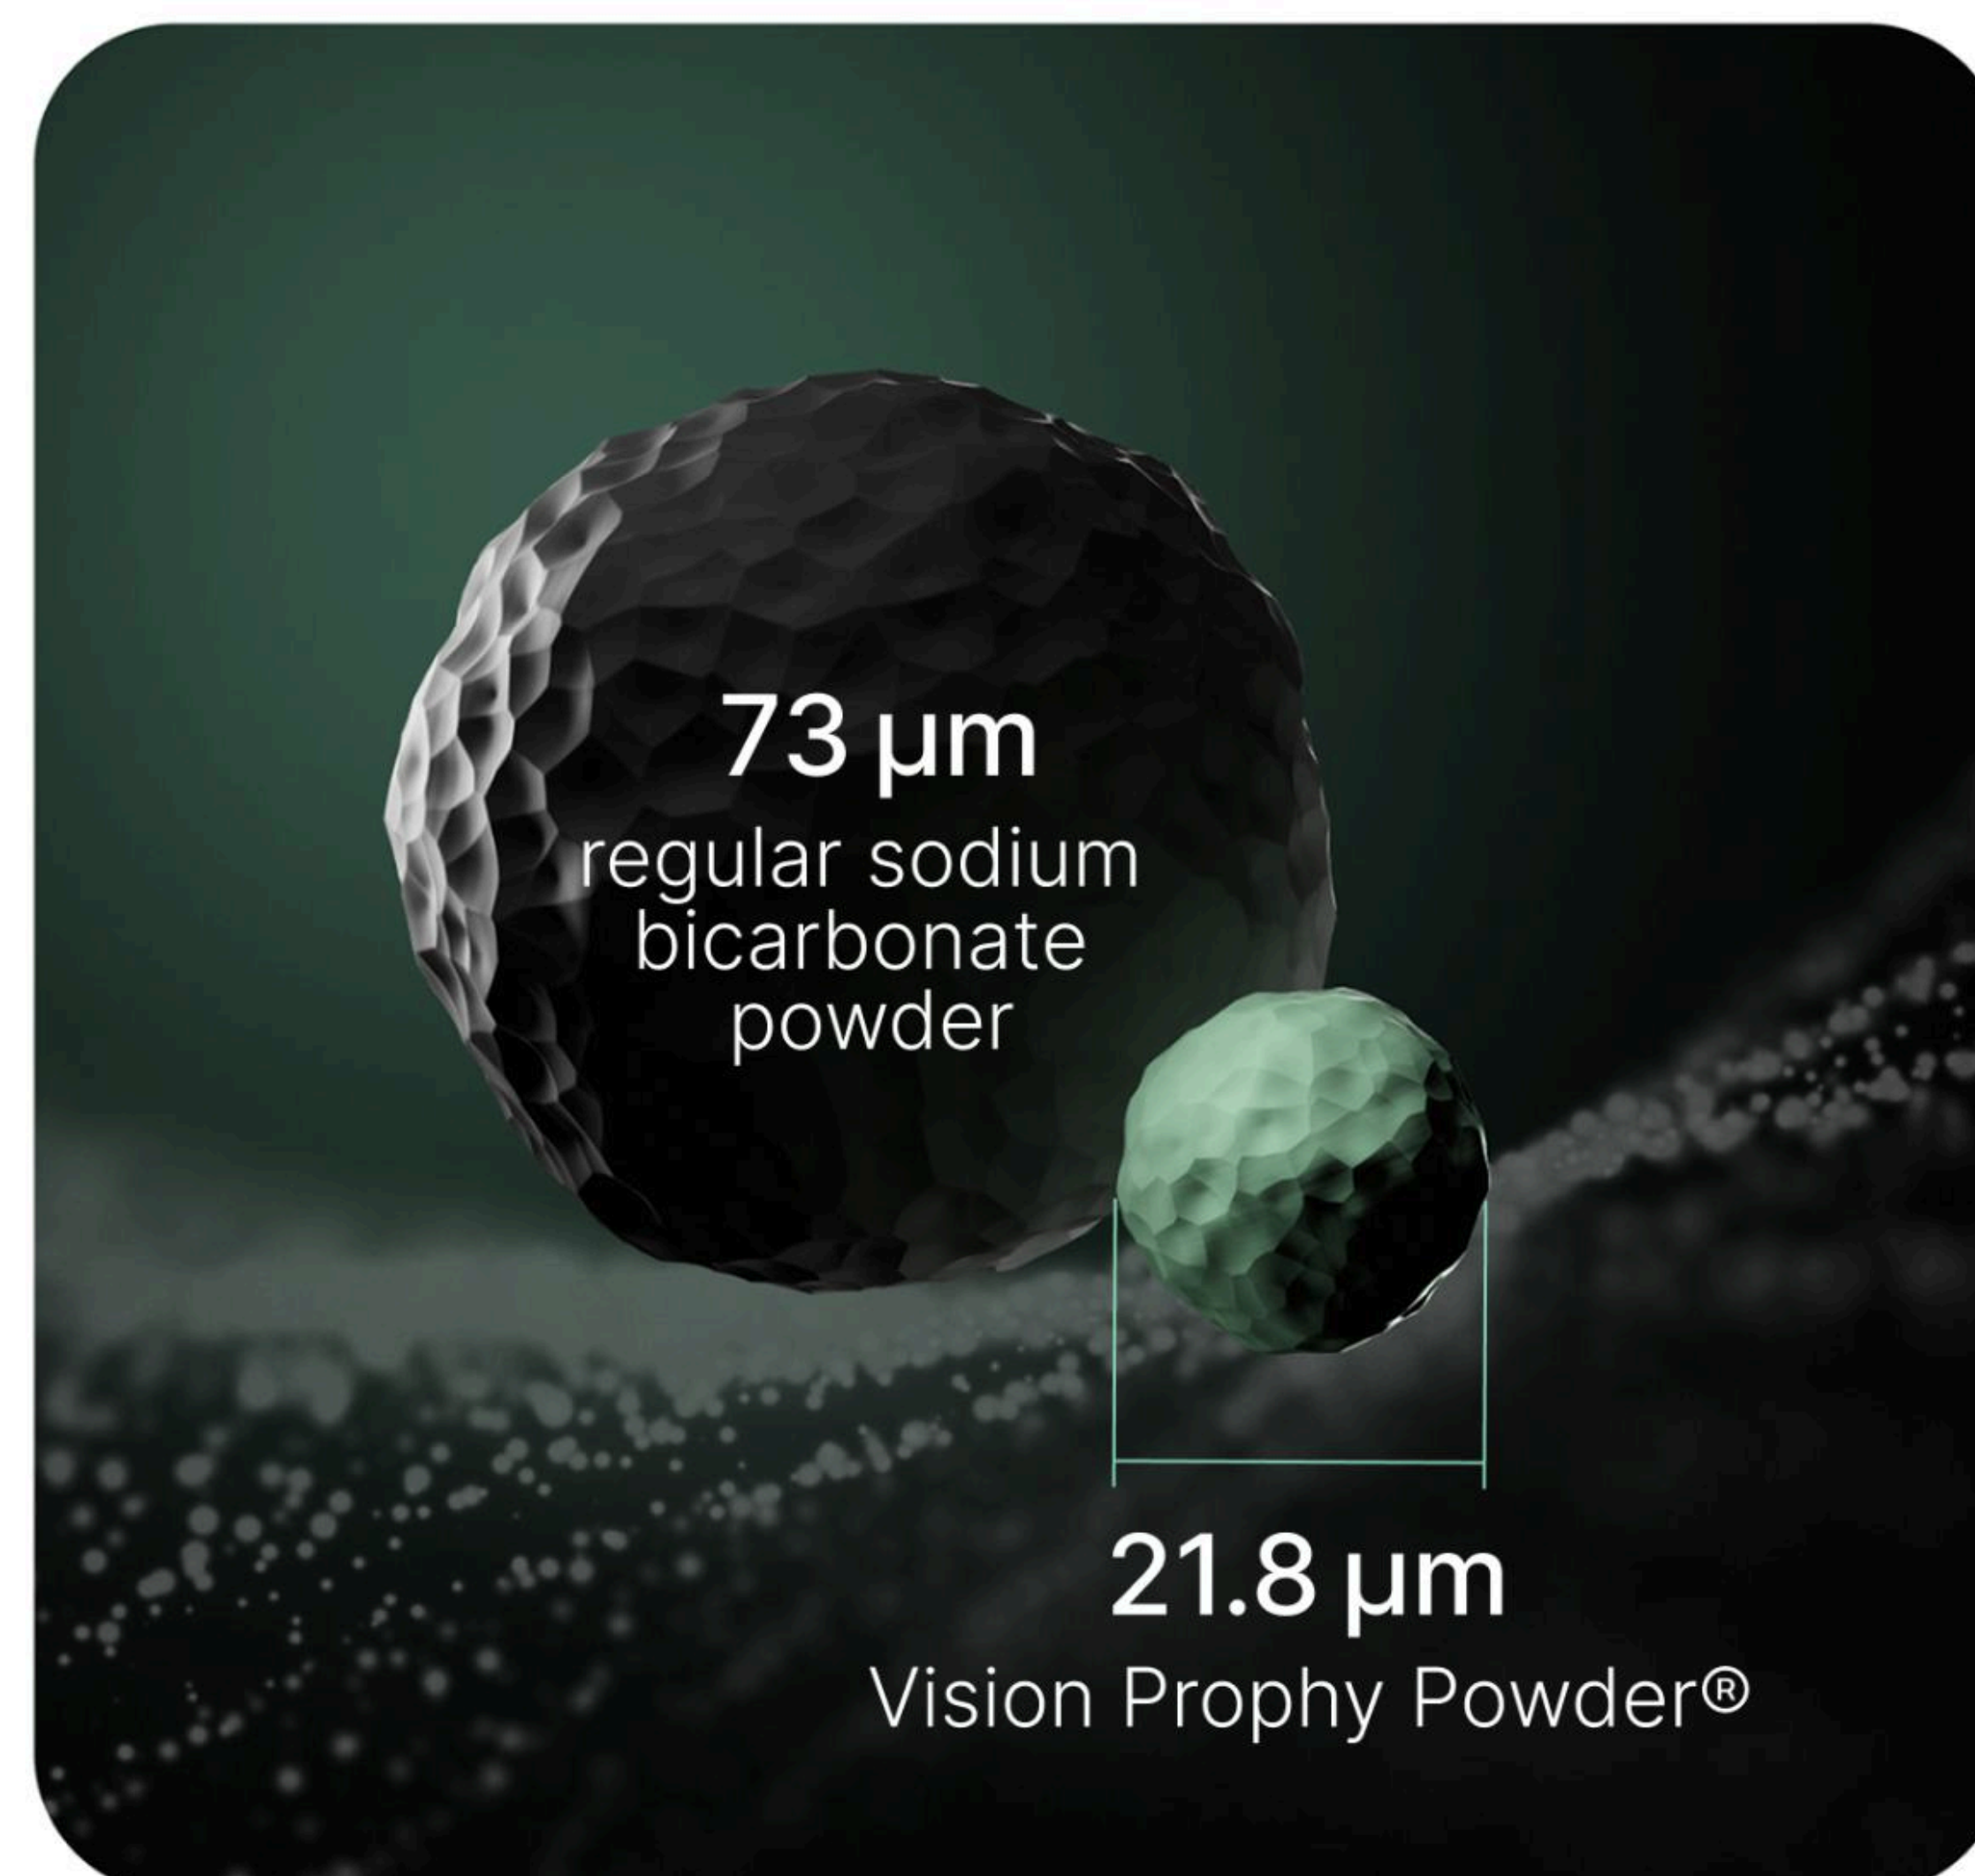

Average particle size $D_{50} = 21.8 \mu\text{m}$

With its precisely calibrated particle size, Vision Prophy Powder guarantees a consistent and reliable powder flow, minimizing clogging and equipment downtime.

The uniform distribution ensures predictable treatment outcomes and reproducible results in every application.

At the same time, the fine particles provide effective cleaning with noticeably greater comfort for the patient.

What's new?

- Refined particle size for smoother flow
- Consistent, clog-free application
- Gentle yet highly effective cleaning results
- Fully compatible with all common air-polishing-devices

Lemon
fresh and invigorating

Black raspberry
a mild, fruity option

Mint
classic and refreshing
